

TARA LABS

RSC Air Forté Speaker Cable

The Air series and Air-tube technology of TARA Labs has been at the forefront of audio cable design for more than twenty years. The Air Forte is a high-performance and highly affordable speaker cable. Each channel is comprised of two separate large Teflon tubes. Each Teflon tube is helixed with 24 RSC Gen 2 conductors, making a total of 48 conductors per channel. This speaker cable takes full advantage of air dielectric design principles.

The Air Forte speaker cable has tight bass frequencies, with a neutral and revealing midrange, where images are rendered with precision and lifelike quality.

- * BSM (1/4" spades or bananas)
- * SAOF-8N copper connectors
- * 10+ gauge conductor runs
- * Each Teflon tube is helixed with 24 RSC Gen 2 conductors
 - * Neutral & revealing
 - * Linear and extended high frequencies
 - * Natural midrange and vocal frequencies
 - * Tight and articulate bass frequencies
