- \* Positive/negative runs are 35 conductors each helixed around Teflon air tubes

- \* Extremely transparent, detailed, open & revealing

- \* Spacious soundstage with well-defined and vivid images

- \* Fine resolution of detail & ambient images

- \* Extremely neutral & open

## REVIEWS:

"TARA Labs speaker cable not only revealed what was missing, they showed that my previous cable had a mid-range tonal emphasis. I also noticed a solid improvement in bass extension and high frequency resolution. TARA Labs speaker cable has NO sound." - Tom W.

"The TARA Labs cabling definitely brought out more solidity and depth to Kashkashian's "purple toned" instrument, especially on her beautiful, long and languid bow strokes." - Nelson Brill / Stereo Times
