

TARA LABS

ISM Onboard The 0.8

This is the enhanced version of ISM Onboard the ONE. Very revealing of low-level ambient and spatial cues with exacting focus. Vivid, lifelike sound within a large, expansive soundstage. This interconnect has Isolated Shield Matrix® and Floating Ground Station® technologies within ISM Onboard Capsule™. It has RSC® SA-OF8N® copper conductors with a natural fiber core, PTFE dielectric throughout ; Aero-PE® primary dielectric throughout and Anti-Corrosion coated copper shield.

* RCA (Torque-Lock™) or XLR

REVIEWS:

"After listening to several of the most marketed cables, TARA Labs was the best cable of the lot, with a warm and seductive quality that brought out the soundstage between the instruments in the several classical recordings I listened to. Superb!" -M.L. / NYC

"When I use the TARA Labs ISM the One Digital and 0.8 Onboard, my friends and guests don't say much about "the sound." And that happens, because the TARA Labs digital cables are so transparent and free of noise that they get out of the way and let the equipment and recordings do the talking. By stepping aside, the TARA Labs digital cables can eliminate barriers between listeners and the music." -John

"I wanted to let you know that last weekend I finally had the chance to incorporate all your cables in my Kondo/Tidal set up. In one word: I am very impressed! A deep black background, a large space in which the various instruments can be recognized and followed (tunes fading away) very clearly. The combination of tremendous transparency and beautiful tonality makes them addictive." -Rodolf
