

TARA LABS

The Omega Evolution SP Speaker Cables

The Omega Evolution SP is one of TARA Labs' ultimate high-end reference speaker cables. Recent reviews from high-end magazines around the world have proclaimed this audio cable as the "the very best!" The Omega Evolution SP delivers lifelike, almost holographic sound, pin-point imaging and clear resolution of fine detail with extreme ease. What you will hear is an accurate harmonic structure extending upwards with the finest and most delicate of high frequencies. This will be

contrasted by a vanishingly low noise floor. The reproduction of the recorded space can only be described as holographic. The qualities of reverberation and ambient retrieval are simply astonishing. The Omega Evolution SP has a level of performance that is beyond comparison to any other speaker cable in the world with the obvious exception of the Grandmaster Evolution.

WHY SO SPECIAL?

As the loudspeaker cables carry a much higher signal voltage and current into a non-linear impedance (the loudspeaker), the reactive load of the loudspeaker can be difficult for some amplifiers to drive, and the all-important damping factor of the amplifier does not change from amplifier to amplifier. The phenomenon is readily apparent, heard as bass that is soft and low in amplitude, sometimes together with high frequencies

that are too smooth or rolled-off, in addition to a loss of musicality. The Omega Evolution SP works exceptionally well with all high-end audio systems, including those components that require additional inductance for optimal performance. Omega Evolution "SP" speaker cables offer : State-of-the-art technology and design that was designed & created by TARA Labs. Their performance is absolutely spectacular when matched with a wide majority of high-end audio components available today.

- * BSM (with interchangeable 1/4" or 5/16" Spades or Bananas)
- * 4+ gauge conductor runs per channel
- * SAOF-8N copper (99.999999% pure, oxygen-free, mono-crystal, super-annealed)
- * Proprietary rectangular solid core (RSC) conductors for optimal performance
- * Each channel comprised of (280) RSC Gen 2 conductors in Aero-PE GMI dielectric (560 total)
- * Separate positive and negative conductor runs for each channel
- * Helixed Rectangular Solid Core conductors in air-tube technology
- * Spectacular power and clarity. Absolutely neutral and coherent
- * Superb resolution of micro-detail and ambient information
- * High-frequency extension, full midrange and tight, rich bass
- * Powerful dynamic contrasts. Superbly defined and vivid images
- * Exceptional holographic soundstage and musicality

More awards, in 30 years, than any other cable manufacturer in the world!
